Portfolio : https://yassineabdelmaksoud90-byte.github.io/portfolio.github.io/

Final-year telecommunications engineering student at ENET'Com, specializing in cybersecurity. Seeking a final-year project (PFE) internship starting February 2027 in the fields of cybersecurity, cloud, DevOps and artificial intelligence. Autonomous, vigilant, analytical, and methodical.

EDUCATION

National Engineering Degree in Telecommunications | ENET'Com, Sfax 2024 – Present

Preparatory Cycle in Physics & Chemistry | IPEIS, Sfax 2022 – 2024

PROFESSIONAL EXPERIENCE

Intern – Mobile Platform Development | Cisen Computer, Sfax July 2026

- Built a cross-platform Flutter mobile app that lets customers track the status, cost, and history of their repairs in real time.
- Designed and implemented a secure Laravel REST API backed by a MySQL database, handling authentication, data validation, and business logic.
- Delivered the full stack independently, from database design to mobile UI, following clean architecture and testing practices.

Technologies : Flutter, Dart, Laravel, PHP, MySQL.

Intern – Networks Maintenance & Monitoring | Tunisie Télécom, Sfax June 2025

- Participated in the maintenance, installation, and configuration of diverse telecom equipments.
- Contributed to incident diagnosis and network infrastructure monitoring.

ACADEMIC PROJECTS

PFA (End-of-Year Project) – Dynamic Securing of SDN Networks through Artificial Intelligence – ENET'Com 2026

- Developed a Machine Learning-based Intrusion Detection System using Random Forest and integrated it with the Ryu SDN controller.
- Built a dataset of over 2,000 network flows to detect SYN, UDP and ICMP flooding attacks, as well as port scanning.
- Optimized the classification model using GridSearchCV, improving accuracy from 75% to 80% and attack recall from 70% to 80%.
- Automated malicious traffic mitigation through OpenFlow 1.3 rules in a virtualized Mininet environment.

Technologies: Python, Mininet, Ryu, OpenFlow 1.3, Ubuntu Server, VMware.

Project – Decentralized Medical Record DApp (Ethereum) – ENET'Com 2026

- Developed and deployed an Ethereum smart contract using Solidity and Hardhat, implementing role-based access control and revocable, time-limited patient authorizations.
- Implemented AES-256-GCM encryption, off-chain data storage and on-chain hash verification to ensure data confidentiality and integrity.
- Integrated the application with MetaMask and ethers.js and implemented eight unit tests.

Technologies: Solidity, Hardhat, Ethereum, ethers.js, MetaMask, Node.js, AES-GCM.

Mini-project – Infrastructure Supervision and Monitoring – ENET'Com 2025

- Deployed Prometheus and Node Exporter to collect system-level metrics and monitor infrastructure components.
- Configured monitoring targets and metric collection parameters using Prometheus configuration files.
- Developed Grafana dashboards to visualize system metrics and monitor service availability.

Technologies: Prometheus, Grafana, Linux, PromQL, Node Exporter.

PERSONAL PROJECTS

Implementation of an Open-Source SOC with AI-Assisted Detection 2026

- Deployed a security monitoring environment using Wazuh, Sysmon and Suricata across Windows and Linux systems.
- Centralized logs from three sources and implemented custom Wazuh detection rules and Sigma rules.
- Simulated 16 MITRE ATT&CK techniques using Atomic Red Team to validate detection capabilities.
- Integrated a local LLM using Ollama to assist alert triage and conducted prompt-injection resistance tests.

Technologies: Wazuh, Sysmon, Suricata, AtomicRed Team, MITREATT&CK, Sigma, Ollama.

TECHNICAL SKILLS

Réseaux & Télécommunications : TCP/IP, VLAN, OSPF, VPN/IPsec, DNS/DHCP, SDN/OpenFlow, Cisco Packet Tracer.
Systèmes & Administration : Linux (Kali Linux, Ubuntu, Ubuntu Server), Windows Server(Active Directory), PowerShell, Bash/Shell.
Cloud, Virtualisation & DevOps : AWS, OpenStack, VMware, Docker, Docker Compose, Kubernetes, Ansible, Git/GitHub.
Cybersécurité & Supervision : Wireshark, Suricata (IDS/IPS), Prometheus, Grafana, Postman.
Programmation & Développement : Python, C, Java(Spring Boot), JavaScript, PHP(Laravel), Node.js, Flutter(Dart), MySQL,REST APIs.
Intelligence artificielle & Data Science : Machine Learning, Supervised Classification, Random Forest, Dataset Preparation and Processing, Feature Engineering.

LANGUAGES

Arabic : Native | **English :** Fluent | **French :** Intermediate
